

Instruction: Answer ANY THREE (3) questions. All questions carry equal marks

✓ Question 1: Meaning and Measures of Usability

- a. According to ISO 9241-11, define usability.
- b. Identify and briefly explain the three usability measures highlighted in the ISO model.
- c. State Nielsen's five usability characteristics.
- d. Explain why the context of use is important when evaluating usability.

✓ Question 2: Usability Evaluation Approaches

- a. What is usability evaluation?
- b. Distinguish between formative evaluation and summative evaluation.
- c. Describe usability testing with users and state its main purpose.
- d. Explain the difference between user-based and expert-based usability evaluation methods.

✓ Question 3: HCI Design Principles

- a. Explain the principle "Know thy user" as required in software design.
- b. What is meant by understanding the task in interaction design?
- c. Explain the idea of reducing users' memory load.
- d. State and briefly explain any two difficulties of achieving good HCI design.

Question 4: Interface Design Concepts and Rules

- a. Define affordance and distinguish between real affordance and perceived affordance.
- b. Explain the concept of mapping with one example from everyday devices.
- c. State any four of Schneiderman's Eight Golden Rules.
- d. Explain why feedback is important in interactive systems.

Question 5: Evaluation Frameworks and Inspection Methods

- a. What is the DECIDE framework, and what is it used for?
- b. Describe "quick and dirty" evaluation.
- c. Explain heuristic evaluation and mention any three of Nielsen's heuristics.
- d. What is a cognitive walkthrough? List the four key questions evaluators ask during the walkthrough.
