2025/2026, FIRST SEMESTER EXAMINATION, FEB. 2026

College: Natural and Applied Sciences

Course Code: SEN 201

Exam Duration: 2 HOURS

Instruction: Answer any three questions

Department: Software Engineering

Course Title: Introduction to Software Engineering Units: 2

- 1(a) Identify SIX objectives of Software Engineering and discuss how these objectives influence your choice of the discipline [3 marks]
- 1(b) Explain program vs software product based on stage involved parameters [2 marks]
- 1(c) As a software engineering student, explain the TWO major tasks performed by Software Engineers in the development of software systems. [2 marks]
- 1(d) What is requirement-based testing in software development? [2 marks]
- 1(e) What is the topic of your assignment in the class [1 mark]

- 2(a) Enumerate FOUR significances of requirement-based testing in software development [2 marks]
- 2(b) With a clear label diagram, explain a prototype model in relation to SDLC in the contemporary software development world [3 marks]
- 2(c) Explain THREE Non-functional testing in software engineering [3 marks]
- 2(d) What is software development? [2 marks]

- 3(a) Differentiate between software life cycle and software development life cycle based on **scope** and **duration aspect**. [4 marks]
- 3(b) Discuss FOUR soft skills software engineers need to succeed in the society [2 marks]
- 3(c) Enumerate TWO characteristics of a good software [2 marks]
- 3(d) As a software engineering students who has distinguishes yourself to become an outstanding student over other demanding courses such as medicine, pharmacy, nursing, law, etc. explain to them what is software engineering means? [2 marks]

- 4(a) Differentiate between high-level (architectural design) and low-level (detailed design) with example [3 marks]
- 4(b) Mention TWO design tools with TWO examples for each design tools as discuss during lecture [3 marks]
- 4(c) Discuss FOUR maintenance types known to you in relation to software engineering documentation and maintenance C A P P [2 marks]
- 4(d) With a clear diagram, explain what you understand by agile development model [2 marks]

- 5(a) Enumerate SIX principles of Requirement-Based Testing [3 marks]
- 5(b) Discuss frameworks with examples and API with types [4 marks]
- 5(c) Present a comparative table for 2-tier and 3-tier client-server models based on business logic, database, and security features [3 marks]
